

## FORMS AUTOMATION FOR PUBLIC UTILITY PROFESSIONALS

Changes in weather, ongoing construction projects, and constant changes in technology and government regulations make running a public utility company incredibly difficult. Now add to those challenges a major disconnect between field staff and the corporate office.

Field automation experts, Field2base, Inc. have designed the ultimate mobility solution for public utility companies who want to automate their work orders, enhance productivity and ensure their customers are being provided with reliable and safe utility services. The first and most important step in achieving automation is eliminating the need for paper forms in the field. Automating paper will give utility companies high visibility into real-time and accurate data from the field which is critical in making informed decisions with limited resources.

- ✓ Convert your existing paper forms into a digital format with limited end user training.
- ✓ Secure your data with 256 Bit AES encryption.
- ✓ Capture enhanced customer data such as photographs, barcodes, signatures, and more.
- ✓ Easily integrate with legacy power management or newer Smart Grid systems.
- ✓ Push work orders out to the field dynamically and instantly review / close tickets upon completion.
- ✓ Capture GPS data for work order verification and route management.

To learn more about our mobile data collection solutions and see a demonstration of how your paper forms can be automated, contact one of our Sales Executives today.
