

Field2Base Awarded Patent for Managed Communications

RTP, N.C. – August 5, 2009 – Field2Base, Inc. announces the award of U.S. Patent No. 7,571,233 by the United States Patent and Trademark Office. The invention describes Field2Base's unique managed communications system that enables the sending of complex documents via cellular, wireless and wired connections to any recipient with the system managing the communication, not the sender.

"This patent is testimony to the unique solution Field2Base provides for organizations desiring immediate availability of complex field data," according to Kyle O'Brien, Chief Executive Officer for Field2Base. "Our technology has been a leader for automating and communicating field data gathering tasks and this patent reinforces and protects the distinctiveness of our products."

The patent pertains to communicating complex field documents through a variety of methodologies; cellular, wireless, wired and Internet from a portable computing device including laptop, Tablet PC and handheld devices with the Field2Base system assuming the responsibility for managing the communication process, not the field user.

"Field2Base software for field automation is designed for the most complex data gathering and paper automation tasks, areas others have struggled," according to Charles Herskowitz, VP of Technology at Field2Base. "Our focus on enabling field users of any technical skill level to communicate from any field location under any circumstances is crucial to successful deployment of mobile solutions."

Field2Base software is used by a variety of organizations in multiple industry segments including field sales, inspections, insurance, field technicians, facilities management, construction, engineering and government to automate field processes, especially paper processes, and deliver field data immediately to business systems in one step.

About Field2Base

Field2Base, a RTP, N.C. based organization, provides end to end field automation solutions for enterprise level customers across multiple industries. Field2Base unique technology enables field users of any skill level to provide complex data collection and immediate delivery to business systems in a single step, regardless of communication availability. Field2Base operates on multiple platforms including Tablet PCs, laptops, Netbooks and Windows Mobile devices.
