Digitize Your Operations. Transform Your Business.

Field2Base. Robust Software and Solutions to Drive Growth.

Our paperless mobile platform drives your digital transformation.

We help companies digitize existing paper forms, automate business processes, and utilize data analytics to empower workforces and increase operational efficiency.

Mobile Forms™
Our flagship product. An intuitive application created specifically for capturing and digitizing data on the go.

- Access your custom forms in the field with no Internet connectivity.
- Capture and securely send field data back to the office from a tablet.
- Android and iOS compatible.

Forms Designer
Quickly create your own customized forms with no coding experience required.

- Use your own form background and draw unlimited form fields.
- Select different types of data to capture including text, numbers, barcodes, photos, GPS and signatures.
- Apply business rules to ensure accurate data collection.

Analytics
Crucial data to make better-informed decisions.

- View interactive graphs of sent form data and identify real-time trends.
- Better manage overall user base and gain accurate measures of performance.
- Track data and pinpoint issues via a heat map feature.

Integration – Enterprise & Small Business
Our solutions easily shares information across applications, improving efficiency throughout your business.

- Seamless integration with QuickBooks and Salesforce.
- Our Data Integration Module (DIM) gives enterprise customers the flexibility to map form data fields to existing backend systems.
- Our Enterprise Dispatch Module (EDM) allows users to automatically dispatch pre-filled forms to the field.

Workflow
Incorporate custom business rules into your mobile forms and manage processes more effectively.

- Allow managers to review, edit and approve data before it reaches its destination.
- Conduct form audit trails for the most up-to-date edits and information.
- Send rejected work back to user's mobile devices to correct mistakes on the go.

Form Security
When sensitive information is captured, we meet rigorous collection and transmission requirements.

- Our applications and data are housed in end-to-end encrypted architecture and hosted in multiple, secure SAS70 and SSAE16-certified data centers.
- Compliant with HIPAA and PCI; satisfies all requirements for Electronic Protected Health Information (EPHI).
- Six-step protocol protects user data continuously from point of origin to end.
